

“Where Does the Saving Come In?”

There is a direct saving in the use of Castle Gate coal, and it lies in the fact that Castle Gate coal produces more heat per ton—and **heat**, not tonnage, is what you pay for.

Six reasons why this coal produces more heat—

1. It is **HIGH** in carbon
2. It is **LOW** in sulphur
3. It is **LOW** in ash
4. It is **LOW** in moisture
5. It burns **FREELY** and **EVENLY**
6. It is **UNIFORM** — every pound the same every day in the year.

Whether you buy coal for your home, your shop or factory or whatever, this famous coal will show you the way to fuel economy.
