Petaluma Incubators

Have stood the test of more than a quarter century, while dozens of others have fallen by the wayside and are heard of no more. The Petaluma was made right to begin with and the conveniences added from time to time keeps it in the lead.

The best machine in the world. A hatching experience of more years than any other. Strongest endorsements from all countries of the globe, is what we offer. Awarded Gold Medal at St. Louis Exposition.

The Petaluma is the one machine that under all conditions establishes the hatching standard and everywhere brings the best results. It is self-regulating, self-ventilating, supplies moisture when needed. Has a regulating device, the surest and most sensitive. Heaters are made entirely of Copper and California Redwood used only in construction.

Petaluma Brooders are acknowledged as superior, simple and economical. Ask for free Catalog.
