

HEPBURN & PETERSON'S AMALGAMATOR.

The subscribers would call the attention of the Mining Public to their Reducer and Amalgamator, and also to their separator for reducing and separating the mineral from **GOLD AND SILVER ORES**, Manufactured and exhibited at the Vulcan Iron Works, Nos. 137 and 139 First St, San Francisco.

These machines secure to the Miner a more Expeditious and Perfect Reduction and Amalgamation, a less liability to accident and delay, and a greater amount of useful effect in proportion to the power employed to keep them in operation than any other machine now in use for producing similar results. This fact is attested to by their general adoption and preference at all the principal Reduction Works in Nevada Territory; among which may be mentioned the Gould & Curry Mill, the Silver State Reduction Works, Zephyr Flat Mill, Pioneer Mill, Eastern Slope Mill, Phoenix Mill, etc. Also may be seen in operation at Kustell Bros. Metallurgical Works, on Bryant Street, between 3 and 4th.

HEPBURN & PETERSON,
SAN FRANCISCO.
