CONSUMERS'

ICE COMPANY,

420 EIGHTH ST.,

SAN FRANCISCO, CAL.

TO THE PUBLIC:

The Ice of this Company is made from Artesian Water drawn from a depth of 200 feet. It is boiled, evaporated, distilled, condensed, cooled, doubled-filtered and frozen without coming in contact with anything that affects it, which process secures a pure, soft water, delicious in taste, charming for the toilet, and entirely free from the dangerous mineral, animal and vegetable matter so generally found in wells, streams and ponds, and offers an absolute security against the dangerous zymotic diseases and kidney troubles so often traced to common ice.

These facts are well known in the Eastern States and abroad, and now no well regulated city allows the sale of ice without official supervision, as whole communities have been decimated through diseases conveyed by impure ice. It is made in block form, 11 in. x 22 in. x 38 in., and cut to suit. It is clearly crystalized, more dense, colder, packs closer, keeps longer, and is superior in every respect to common ice.

The \$12 Refrigerator offered will hold 200 lbs. of Ice, enough to last ten days, and will contain all the provisions required by a good sized family, making the cost about ten cents daily.
