

Many
office workers
are kept
in the dark

Do any of them work for you?

The more light people have, the faster they can see. The faster they can see, the more efficient they are. The more efficient they are, the more profit for you. For more information on modern office lighting contact your architect, engineer or PG&E. Or, write to the Northern California Electrical Bureau, 1355 Market Street, San Francisco for the free booklets: "What's New in Office Lighting" and "Recommended Levels of Illumination."
