

# GAS AIR CONDITIONING IS THE BEST WAY TO KEEP A LARGE HOSPITAL COOL

**(or a small motel)**

Gas absorption air conditioning is the nicest thing that's happened to the climate inside of buildings since windows. Since it cools air with a minimum of moving parts, maintenance costs are low. And it's durable. A gas cooling and heating system, for example, is estimated to last the mortgage life of the building. No wonder more and more restaurants, homes, motels, and large buildings have *gas* air conditioning. See your architect or engineer. For free booklet on home or commercial installation, write PG&E, Room 408, 245 Market Street, San Francisco, CA 94106
