## MANUFACTORIES.

### GLOBE IRON WORKS,

Among the earliest and most important manufacturing establishments of Stockton is the one entitled as above, and located on the corner of Main and Commerce streets. It was established by E. I. Keep in 1857, at a time when most of the machinery turned out was for mining purposes. Upon the death of Mr. Keep it was carried on for six months by the estate of deceased and then passed into the hands of Keep & Blake, and successively into those of Keep, Blake & Co., and Keep & Bargion. John Caine, the present owner, succeeded the last named firm in June, 1875. Steam engines for steamboat and stationary purposes, machinery and castings of every kind are manufactured, and the work is of a quality equal to that made by any similar establishment in the State. Recently; particular attention has been given to the manufacture of agricultural implements. A speciality is also made of the manufacture of Root's Patent Force Blast Blowers and Portable Forges, of which Mr. Caine is the sole agent and manufacturer. Harshberger's Patent Wheat Scourers or Smut Mills are likewise made here. Twenty men are at present on the pay-roll of the establishment, though as high as thirty are frequently employed.

### STOCKTON IRON WORKS—FARRINGTON, HYATT & CO., PROPRIETORS.

This establishment is located at Nos. 181 and 183 California street. It was established in July, 1868. It combines within itself a machine shop, pattern shop, blacksmith shop, iron and brass foundry. The proprietors annually manufacture steam engines, agricultural implements and architectural designs, machinery in general, and forgings. It is the only exclusive brass foundry in the city. The average number of employees for the year 1877, were 20.
