

For faster out-of-town Telephone calls—

People find these suggestions helpful

1. Please consult the front pages of your telephone directory for complete long distance information.
2. Please place your call by *number* whenever possible—it will save you time.
3. If it is desired to know charges on the call, please notify the operator at the time the call is filed.
4. Please remain at the telephone until operator concludes the desired service.
5. If there is a delay and it becomes necessary to try again at a certain notified time, please try to be at or near the telephone at the time agreed.
6. Please hang up promptly and gently at finish of call.

Telephoning is a mutual undertaking that involves the person calling, the person called, and the telephone company's staff and facilities. Service, to be satisfactory, needs the closest possible co-operation of all three parties.

Twisted Cords

Running through the telephone cord are a number of delicate, flexible wires.

"Kinks" are formed when this cord is allowed to become twisted, and some of these wires may be bent or broken.

This means a "noisy" telephone line. You cannot hear or be heard as well. In fact, a twisted cord may cause a complete interruption of your service.

Keeping the telephone cord straight will give you greater satisfaction in the use of your telephone.
